

1.How the Game has changed to adapt to smaller screen and different controls on the mobile phone?
How do these changes affect gaming experience?

Ans- Difference between playing on the laptop and mobile phone is that, on mobile phone there is an arrow which moves ahead of the snake thus providing easier control for the user compare to laptop where we have to move the according to the desired direction. Also to move snake faster we use mouse right click button but in case of mobile we have separate control on screen to press to move snake faster. It is easier to mouse right click In case of laptop or Desktop compare to mobile phones control due to small size of the screen.
